

EUDR COMPLIANCE MADE EASY:

How tex idea saves 95% of manual effort with osapiens

Company Profile

tex idea GmbH is an internationally active trading company with global supply chains. The 12 employees develop and distribute a wide range of home textiles, outdoor furniture, and pet products in the private label and licensing sectors.

Challenges

With the EU Deforestation Regulation coming into force, tex idea had to check which products were affected by the regulation. At the same time, it was necessary to raise awareness among employees and establish a legally compliant implementation process. Manual implementation would have meant considerable effort and increased risks.

Why osapiens?

tex idea decided early on to use the osapiens HUB for EUDR, as the solution is specifically tailored to the requirements of the EUDR.

Key decision arguments for tex idea included:

- Very good price-performance ratio
- User-friendly solution with a fast onboarding
- Integrated risk analysis and DDS creation and EU TRACES connection
- Low workload with high regulatory security

Solution: a central platform – the osapiens HUB

With the osapiens HUB for EUDR, tex idea relies on a central platform:

- Recording of EUDR-relevant products and suppliers
- Automated risk analysis and DDS creation
- Legally compliant transmission to EU TRACES

With the osapiens HUB for EUDR, we have found a solution that makes EUDR compliance practicable for a small business. Instead of uncertainty, we now have transparency, clear processes, and the certainty that we will be able to confidently master future requirements.

UTE GILMOUR

Head of Sustainability and Supply
Chain Management, tex idea GmbH

Company:

45 employees
