osapiens – one platform for sustainable growth

osapiens develops cloud-based software solutions that empower companies worldwide to meet regulatory requirements, unlock efficiency potential, and drive sustainable growth across their entire value chain. At the core is the **osapiens HUB** – a holistic, AI-powered platform with integrated solutions that redefine transparency, automation, and operational excellence.

Headquartered in Mannheim, Germany, osapiens operates internationally with offices in France, Benelux, Italy, Spain, the UK, the Nordics, and the US. Over **500 employees** are dedicated to supporting companies in their digital and sustainable transformation. More than **2,000 customers in over 60 countries** trust the platform, including brands such as **Coca-Cola**, **Otto, Nordex, Costco, Metro** and **Neumann Kaffee Gruppe**.

Sustainability as a Growth Opportunity

The **osapiens HUB** acts as the digital backbone for modern sustainability strategies. It brings together more than 25 **specialized modules,** ranging from sustainability reporting and supply chain transparency to smart maintenance management. All modules operate on a shared database, can be flexibly combined, scale with business needs. This creates a comprehensive solution that ensures regulatory compliance while making corporate sustainability measurable and manageable on a data-driven basis.

With **Transparency Solutions**, osapiens enables complete visibility, monitoring, and documentation across the entire value chain, from country-level risk assessments and business partner evaluation to product-level traceability. These modular solutions support compliance with regulations such as EUDR, CSRD, CSDDD, and national supply chain laws. Features include reporting tools, digital whistleblower protection, the Digital Product Passport, and the analysis of CO_2 and sustainability metrics – all built on a single database and automated through AI-driven processes.

With **Efficiency Solutions**, osapiens supports companies in optimizing their long-term operations. This includes structured supplier management, automated maintenance processes, field service, and last mile delivery. The modules cover operational areas such as CMMS, facility management, audit management, mobile sales, and collection processes. This leads to more efficient resource utilization, minimized downtime, and measurable gains in everyday operational service quality.

Smart Integration for Greater Automation

The modular structure and advanced automation make the osapiens HUB especially powerful. All solutions access a central database, ensuring consistent **information across the business**. **Smart workflows reduce manual effort**, while integrated analytics and reporting tools create real-time transparency. The HUB also delivers **automated risk**

assessments based on external data sources, such as country, industry, or supplier risks, enabling informed, targeted decision. Thanks to **seamless ERP integration**, the HUB fits effortlessly into existing systems. With tools such as the Reporting Cockpit and Workflow Builder, it adapts to evolving business needs, empowering companies to act faster, anticipate challenges, and strengthen resilience.
