

Navigating the EU's Expanded Cybersecurity Rules

Learn how NIS2 impacts your business – and what you need to do

In force since January 2023, the NIS2 Directive strengthens cybersecurity across the EU through harmonized security standards, risk management, and reporting obligations. It significantly expands the scope of companies affected compared to the original NIS Directive.

One Directive – Numerous Sectors Affected

The NIS2 Directive applies to a wide range of sectors considered essential or important for the functioning of society and the economy. These include, among others, healthcare, digital infrastructure, energy, transportation, manufacturing, finance, and the food sector.

NIS2 applies to organizations in 18 critical sectors, listed in [Annex I](#) and [Annex II](#) of the directive.

Note: *Smaller businesses may also be in scope if classified by Member States as high-risk, or if they are part of critical infrastructure or essential supply chains.*

Timetable

Key Focus Areas Under NIS2

Expanded Security Requirements:

Risk management, security policies, and contingency planning.

Verification Obligations:

Detailed documentation to demonstrate compliance.

Stricter Penalties: Substantial fines for non-compliance.

Supply Chain Complexity:

Ensuring supplier compliance and visibility.

Effortless NIS2 Compliance with osapiens

Automated risk assessment: With osapiens HUB for NIS2, you can automatically assess supplier risks, ensuring a seamless and accurate evaluation process.

Risk scoring and exposure insights: Suppliers complete a tailored questionnaire, and AI automatically assigns a risk score with clear exposure insights. Continuous AI-powered news monitoring runs in parallel, flagging relevant developments and triggering alerts as new risk signals emerge.

Smart and automated workflows: Set up workflows that match your internal policies. The software triggers actions when high risks or expired documents are detected, helping you always stay compliant.

End-to-end transparency: Monitor supplier risks throughout the entire process – from data collection and assessment to mitigation and follow-up. Ensure a transparent, traceable, and audit-ready supply chain.
